## EMERGENCY FIRE ESCAPE SECURITY SCREENS

FEW WOULD ARGUE THAT LOSING A HOME AND POSSESSIONS IN A FIRE ISN'T A TERRIBLE EVENT. IT PALES INTO INSIGNIFICANCE THOUGH WHEN THE LOSS INCLUDES THAT OF A LOVED ONE.

Yet, every winter in particular, we are witness to these horrific stories repeated time and again. Home owners concerned for their security unwittingly trap themselves and their families in rooms by fitting security bars and other devices across window openings.

ALSPEC provides a simple and effective solution to this issue through their range of INVISI-SCAPE screens a single action opening screen that provides for security without the risk of entrapment.

INVISI-SCAPE opens readily by pressing the spring activated lock. This can be done by adults as well as children, and the lock handle is readily identified by glow in the dark stickers. The range includes outward opening, inward opening and

sliding escape options, and can be fabricated in any standard powdercoat colour to match your existing windows and décor.

The INVISI-SCAPE system uses the same Extreme Grip Pressure EGP method as in the INVISI-GARD product to secure the aluminium frame to the mesh infill. This in turn is made from marine grade GR316 stainless steel and provides the homeowner with outstanding security and low maintenance longevity.

Consult with your local Fire and Rescue Authority to assist you to put together a fire evacuation plan, and ensure INVISI-SCAPE is an integral part of that plan.
