

KidScreen Window Fall Prevention

The fall prevention screening solution that keeps your children safe

As of May 2013 new requirements in the National Construction Code apply to windows in bedrooms and early childhood centres to prevent children falling from windows.

KidScreen protection screens allow you to meet these requirements whilst still maintaining peace of mind that your children are safe with full opening of your window for ventilation.

About the system

KidScreen is a unique patent pending cost effective barrier solution designed specifically for child protection of openable windows.

Incorporating the exclusive KidScreen reinforced polyester mesh or stainless steel 316 grade mesh allowing compliance to various building construction requirements without compromising the look of the window.

The KidScreen protection screen has been successfully and independently certified to the Australian Window Association Industry code of Practice ICP.005 exceeding the minimum 250N force (25kg) required as outlined in the National Construction Code 2013 (D.2.24).

Use of a KidScreen protection screen when secured correctly to the window means it can be left fully open allowing natural air ventilation of the particular window type. This means no restricted opening is required.

KidScreen protection screen can be egress by an adult to provide an escape route in the event of a fire or emergency situation in a building.

All KidScreen protection screens are made to measure to meet the exact requirement of the National Construction Code 2013 ensuring that your children are in the safest possible environment.

A full range of powder coat colours along with anodised finishes are readily available from your local KidScreen fabricator.

KidScreen is brought to you by ALSPEC, the makers of INVISI-GARD 316 Stainless Steel Security.

Proud supporters of the Kids Don't Fly & Australia Window Association Safety Initiative

The advantage of this new KidScreen product is it will not restrict the opening of the window, allowing maximum ventilation.

Restricted Window with Hardware

Unrestricted Window with KidScreen

"As a father, who actually has a second storey to my home, I was instantly drawn to the seriousness of this issue. I was unaware of the high number of children admitted to hospital annually due to the inadequacies of traditional flyscreens."

Danny Green

INVISI-GARD Spokesperson
